

Global coverage of all your networking requirements

“Software installation and Desktop management anywhere in the world”

When we say Big Business IT solutions for your corporation, we mean it!

At Nexus, we take care of networks, servers and desktops in countries all over the world. We remotely manage all your corporate IT assets, from software applications to disaster recovery.

With our expertise in managing clients’ needs locally or globally, the only requirement of your company is an Internet connection. We can protect your data, keep your email free of virus infections, SPAM, and other threats to the integrity of your Networks, as well as install or update software to your workstations no matter where they are.

What about free and secure multi-national phone calls (including those very expensive conference calls) between your offices? The biggest problem you will have is getting your Hong Kong manager out of bed in your time zone!

We support over 2000 devices in 33 countries through our professionally staffed Global Helpdesk Centers in Dornoch, Scotland and Maine, USA in the regions, countries and cities listed below:

Region	Country	City	
Americas	Brazil	Sao Paulo
