

NexMail Exchange Server 2003 Hosting

SPAM and virus free email messaging: safe, secure and up to date

NexMail, our managed email service, is available to provide your company with hassle free email messaging, without losing bandwidth, disk space and above all, your valuable time to deal with virus attacks and other threats to your IT environment. We will make your life easier!

- **Hosted Exchange 2003, Dedicated Managed Exchange platforms or simply POP3**
- **Fully supported (24/7), including patches, upgrades, back-ups and administration**
- **OWA availability**
- **Archiving availability (Sarbanes Oxley)**
- **Included SPAM and anti-virus filtering with real-time user dashboard**

NexMail is designed for organizations that need to change their email message systems from Exchange Server 5.5 on Windows NT Server 4.0, as Microsoft retired support for these products in 2003 and 2004 respectively.

The NexMail platform allows for safe, secure and up to date email messaging that will be SPAM and virus free. All incoming and outgoing mail is checked. For instance, in February 2005 our service processed **1744403 emails, with a 60.88 % SPAM and 2.75% Virus content, and an overall SPAM accuracy of 99.53 %!** If your Company must retain all electronic records, including email involved in auditing procedures because of regulations such as the Sarbanes-Oxley act, **Email Archiving** can be part of our NexMail Service.

Let us host your email system in our world class Data Center and enable you to take advantage of the very latest Exchange facilities (without necessarily upgrading to Active Directory, a costly addition).

Services are offered at different levels that include initial user setup on the system, migration of email data and all necessary licensing:

POP3 and Exchange users have access to Web Mail, Outlook Web Access for 2003

All data is protected by Backup

NexMail can also accommodate custom configurations.
Guaranteed **99.9%** uptime applies to redundant electrical power and Internet access.
Server uptime varies, based upon a dedicated hosting configuration.
