("Nexus Management" or "the Company")

NEW LOW COST HIGH SECURITY PRODUCT LAUNCH FOR RESILIENCE

Nexus Management's wholly owned subsidiary, Resilience Technology Corp ("Resilience"), is pleased to announce the launch of its new security product, the '9100 Small Appliance for High Security Requirements'. This appliance allows organisations to ensure high levels of security, compliant with corporate standards, but at a much lower cost compared to products and solutions currently available in the market.

Companies, including banks, power utilities and retailers have increasingly higher critical security needs at the end points of their networks. To date, the costs of extending corporate level security standards across a Customer's network have been significant and in many cases prohibitive. Examples of such end points include ATM's (Automated Teller Machines), which, to achieve the required levels of security, currently have to use expensive lease lines, and retail outlets who typically require lower cost solutions. These customers have helped Resilience define the latest extension of our security appliance family, the 9100 Small Appliance for High Security Requirements.

Now customers can choose to run a full firewall license, Websense v7 content filtering, or other Linux-based security applications, in a small low cost unit, providing high levels of performance and guaranteed uptime. The 9100 allows customers, many of whom are undertaking cost saving initiatives, to extend their standard corporate security products and policies to the remote areas of their networks.

Sean Scott, CEO of Resilience, commented: **"With the release of the 9100 Small Security Appliance customers can extend their standard corporate security platform anywhere on the planet in a plug and play secure platform.**

Our standards based approach to purpose built, security appliances helps service providers by delivering feature rich, cutting edge solutions, faster and at lower costs than the competition."

Roger Richardson, CEO of Nexus Management, commented: **"The 9100 Small Appliance for High Security Requirements' is an expansion of the portfolio of performance solutions offered by Resilience. Our product range is designed for network environments where availability is**

essential and security must not be compromised - reliability and security are synonymous with the brand name and highly valued by our customers.”
